UNIT 3 – TECHNOLOGY & RELATIONSHIPS

WARM-UP: THE SCREEN VS. SOUL DILEMMA

TASK 1: IMAGE DECODING & VOCABULARY MATCHING

Part A: Work with a partner. Look at the three photos below. Match each situation with the correct term from the word bank, then choose the correct definition.

1. Ghosting **2. Phubbing** **3. FOMO (Fear Of Missing Out)**

A. An uneasy and sometimes all-consuming feeling that others are having more fun or rewarding experiences than you are.

B. The abrupt cessation of all communication with someone (especially in dating or friendships) without prior notice or explanation.

C. The practice of ignoring one's companion or surroundings in order to pay attention to a mobile phone.

Part B: Discuss the following questions with your partner (2 minutes per turn).

1. Have you ever experienced phubbing, FOMO, or ghosting in your daily life? How did it make you feel?
2. Which of these three behaviours poses the biggest threat to real-world friendships today, and why?
3. What is one practical rule you could set to prevent technology from damaging your personal relationships?

TASK 2: THE "RED FLAG" SPECTRUM: MILDLY ANNOYING OR TOXIC?

*Evaluate modern digital habits. Rate each scenario from **1 to 5** on the toxicity scale, then jot down a short reason to justify your rating to your partner.*

1 = Mildly Annoying / Harmless ↔ **5** = Major Red Flag / Toxic

Real-life Scenario	Rating (1 - 5)	Why? (Keywords / phrases)
Scenario A: Your close friend leaves your message on "Seen" for 3 days while constantly sharing memes and posting stories.	[ ]	_____
Scenario B: You are having dinner with a friend, and they place their phone screen-up, glancing at every single buzz and pop-up.	[ ]	_____

Real-life Scenario	Rating (1 - 5)	Why? (Keywords / phrases)
Scenario C: You stay home to recharge, but spend hours refreshing Instagram stories to see what your peers are doing without you.	[ ]	_____
Scenario D: After 2 weeks of working on a group presentation, your teammate suddenly blocks you on all platforms without a word.	[ ]	_____

TASK 3: SELF-AUDIT & REFLECTION

Check [✓] the boxes that truthfully describe your habits over the past 48 hours:

- [ ] I felt a sudden urge to check social media because I saw photos from a gathering I didn't attend.
- [ ] I checked my smartphone while someone was talking directly to me face-to-face.
- [ ] I intentionally avoided opening a text message, waiting for the person to "take the hint" and stop asking.
- [ ] I felt anxious or distracted when my phone battery dropped below 20% in public.

Score Interpretation:

- **0 – 1 check:** *Mindful Digital Native* – You maintain healthy boundaries with your screen.
- **2 – 3 checks:** *Borderline Phubber / FOMO Prone* – Technology is beginning to dictate your attention span.
- **4 checks:** *Digital Overload* – High risk of social fatigue and strained real-world relationships.

One-Sentence Takeaway:

Write one commitment to protect your real-life connections this week:

→ *"From now on, I will _____"*

LISTENING

MATCHING

PRACTICE 1 (Track 3.1)

Questions 31-35

Complete the sentences below.

Write **NO MORE THAN TWO WORDS** for each answer.

Mobile phones now have the technology to

- send **31 _____** of where the sender is.
- watch **32 _____** in real-time.
- send **33 _____ -** with texts.
- inform students about lectures which are **34 _____**
- transfer **35 _____** to a computer.

Questions 36-40

Write the correct letter**, A, B, or C** next to **Questions 36-40** on your answer sheet.

Which group of people are the main users of mobile phones for the following purposes?

A women
B men
C men and women

Ways of Using Mobile Phones

36 to access information _____
37 to stay in touch _____
38 for business _____
39 to store personal photos _____
40 as a camera _____

PRACTICE 2 (Track 3.2)

Questions 21 - 26

What did findings of previous research claim about the personality traits a child is likely to have because of their position in the family?

Choose **SIX** answers from the box and write the correct letter, **A-H**, next to **Questions 21-26.**

Personality traits

A outgoing
B selfish
C independent
D attention-seeking
E introverted
F co-operative
G caring
H competitive

21 _____ The eldest child
22 _____ A middle child
23 _____ The youngest child
24 _____ A twin
25 _____ An only child
26 _____ A child with much older siblings

Questions 27 and 28

Choose the correct letter, A, B or C.

27 What do the speakers say about the evidence relating to birth order and academic success?

A There is conflicting evidence about whether oldest children perform best in intelligence tests.

B There is little doubt that birth order has less influence on academic achievement than socio-economic status.

C Some studies have neglected to include important factors such as family size.

28 What does Ruth think is surprising about the difference in oldest children's academic performance?

A It is mainly thanks to their roles as teachers for their younger siblings.

B The advantages they have only lead to a slightly higher level of achievement.

C The extra parental attention they receive at a young age makes little difference.

Questions 29 - 30

Choose TWO letters, A-E.

Which TWO experiences of sibling rivalry do the speakers agree has been valuable for them?

A learning to share
B learning to stand up for oneself
C learning to be a good loser
D learning to be tolerant
E learning to say sorry

MATCHING SENTENCES / ENDINGS

PRACTICE 1

Want To Be Friends?

Could the benefits of online social networking be too good to miss out on?

A. For many hundreds of thousands of people worldwide, online networking has become enmeshed in our daily lives. However, it is a decades-old insight from a study of traditional social networks that best illuminates one of the most important aspects of today's online networking. In 1973 sociologist Mark Granovetter showed how the loose acquaintances, or weak ties, in our social network exert a disproportionate influence over our behavior and choices. Granovetter's research showed that a significant percentage of people get their jobs as a result of recommendations or advice provided by a weak tie. Today our number of weak-tie contacts has exploded via online social networking. 'You couldn't maintain all of those weak ties on your own, ' says Jennifer Golbeck of the University of Maryland, 'Online sites, such as Facebook, give you a way of cataloguing them.' The result? It's now significantly easier for the schoolfriend you haven't seen in years to pass you a tip that alters your behaviour, from recommendation of a low-cholesterol breakfast cereal to a party invite where you meet your future wife or husband.

B. The explosion of weak ties could have profound consequences for our social structures too, according to Judith Donath of the Berkman Genter for Internet and Society at Harvard University. 'We're already seeing changes, ' she says. For example, many people now turn to their online social networks ahead of sources such as newspapers and television for trusted and relevant news or information. What they hear could well be inaccurate, but the change is happening nonetheless. If these huge 'supernets' - some of them numbering up to 5, 000 people - continue to thrive and grow, they could fundamentally change the way we share information and transform our notions of relationships.

C. But are these vast networks really that relevant to us on a personal level? Robin Dunbar, an evolutionary anthropologist at the University of Oxford, believes that our primate brains place a cap on the number of genuine social relationships we can actually cope with: roughly 150. According to Dunbar, online social networking appears to be very good for 'servicing' relationships, but not for establishing them. He argues that our evolutionary roots mean we still depend heavily on physical and face-to-face contact to be able to create ties.

D. Nonetheless, there is evidence that online networking can transform our daily interactions. In an experiment at Cornell University, psychologist Jeff Hancock asked participants to try to encourage other participants to like them via instant messaging conversation. Beforehand, some members of the trial were allowed to view the Facebook profile of the person they were trying to win over. He found that those with Facebook access asked questions to which they already knew the answers or raised things they had in common, and as result were much more successful in their social relationships. Hancock concluded that people who use these sites to keep updated on the activities of their acquaintances are more likely to be liked in subsequent social interactions.

E. Online social networking may also have tangible effects on our well-being. Nicole Ellison of Michigan State University found that the frequency of networking site use correlates with greater self- esteem. Support and affirmation from the weak ties could be the explanation, says Ellison. 'Asking your close friends for help or advice is nothing new, but we are seeing a lowering of barriers among acquaintances, ' she says. People are readily sharing personal feelings and experiences to a wider circle than they might once have done. Sandy Pentland at the Massachusetts Institute of Technology agrees. The ability to broadcast to our social group means we need never feel alone/ he says. The things that befall us are often due to a lack of social support. There's more of a safety net now.'

F. Henry Holzman, also at MIT, who studies the interface between online social networking and the real world, points out that increased visibility also means our various social spheres - family, work, friends - are merging, and so we will have to prepare for new societal norms. 'We'll have to learn how to live a more transparent life, ' he says. We may have to give up some ability to show very limited glimpses of ourselves to others.'

G. Another way that online networking appears to be changing our social structures is through dominance. In one repeated experiment, Michael Kearns of the University of Pennsylvania asked 30 volunteers to quickly reach consensus in an online game over a choice between two colours. Each person was offered a cash reward if they succeeded in persuading the group to pick one or other colour. All participants could see the colour chosen by some of the other people, but certain participants had an extra advantage: the ability to see more of the participants' chosen colours than others. Every time Kearns found that those who could see the choices of more participants (in other words, were better connected) persuaded the group to pick their colour, even when they had to persuade the vast majority to give up their financial incentive. While Kearns warns that the setting was artificial, he says it's possible that greater persuasive power could lie with well-connected individuals in the everyday online world too.

Question 27-32
The Reading Passage has seven paragraphs, A-G
Choose the correct heading for paragraphs B-G from the list of headings below
Write the correct number, i-x, in boxes 27-32 on your answer sheet.

List of Headings	
i A shift in our fact-finding habits	**vi** Information that could change how you live
ii How to be popular	**vii** The emotional benefits of online networking
iii More personal information being known	**viii** A change in how we view our online friendships
iv The origins of online social networks	**ix** The future of networking
v The link between knowledge and influence	**x** Doubts about the value of online socializing

27 _____ Paragraph **B** **29** _____ Paragraph **D** **31** _____ Paragraph **F**
28 _____ Paragraph **C** **30** _____ Paragraph **E** **32** _____ Paragraph **G**

Question 33 - 36
Look at the following findings (Questions 33-36) and the list of researchers below.
Match each finding with the correct researcher, A-F. Write the correct letter, A-F, in boxes 33-36 on your answer sheet.

List of researchers

A Mark Granovetter **C** Robin Dunbar **E** Nicole Ellison
B Judith Donath **D** Jeff Hancock **F** Michael Kearns

33 _____ People who network widely may be more able to exert pressure on others.
34 _____ We have become more willing to confide in an extensive number of people.
35 _____ There is a limit to how many meaningful relationships we can maintain.
36 _____ There is a social advantage in knowing about the lives of our online contacts.

Questions 37 & 38

Choose TWO answers, A-E.

Which TWO advantages of online social networking are mentioned in the Reading Passage?

A Social networking sites can be accessed on any day at any time.

B Online socialising is an efficient way of keeping in touch with a lot of people.

C It is very easy to establish new friendships online.

D Online social networking can solve problems in real-world relationships.

E It can be reassuring to be part of an online social network.

Questions 39 & 40

Choose TWO answers, A-E.

Which TWO disadvantages of online social networking are mentioned in the Reading Passage?

A Information from online social contacts may be unreliable.

B We may become jealous of people who seem to have a wide circle of friends.

C We may lose the ability to relate to people face-to-face.

D It is easy to waste a lot of time on social networking sites.

E Using social networking sites may result in a lack of privacy.

PRACTICE 2

Robots and us

Three leaders in their fields answer questions about our relationships with robots.

When asked 'Should robots be used to colonise other planets?', cosmology and astrophysics Professor Martin Rees said he believed the solar system would be mapped by robotic craft by the end of the century. 'The next step would be mining of asteroids, enabling fabrication of large structures in space without having to bring all the raw materials from Earth. ... I think this is more realistic and benign than the ... "terraforming" of planets.'* He maintains that colonised planets 'should be preserved with a status that is analogous to Antarctica here on Earth.'

On the question of using robots to colonise other planets and exploit mineral resources, engineering Professor Daniel Wolpert replied, 'I don't see a pressing need to colonise other planets unless we can bring [these] resources back to Earth. The vast majority of Earth is currently inaccessible to us. Using robots to gather resources nearer to home would seem to be a better use of our robotic tools.'

Meanwhile, for anthropology Professor Kathleen Richardson, the idea of 'colonisation' of other planets seemed morally dubious: 'I think whether we do something on Earth or on Mars we should always do it in the spirit of a genuine interest in "the Other", not to impose a particular model, but to meet "the Other".'

In response to the second question, 'How soon will machine intelligence outstrip human intelligence?', Rees mentions robots that are advanced enough to beat humans at chess, but then goes on to say, 'Robots are still limited in their ability to sense their environment: they can't yet recognise and move the pieces on a real chessboard as cleverly as a child can. Later this century, however, their more advanced successors may relate to their surroundings, and to people, as adeptly as we do. Moral questions then arise. ... Should we feel guilty about exploiting [sophisticated robots]? Should we fret if they are underemployed, frustrated, or bored?'

Wolpert's response to the question about machine intelligence outstripping human intelligence was this: 'In a limited sense it already has. Machines can already navigate, remember and search for items with an ability that far outstrips humans. However, there is no machine that can identify visual objects or speech with the reliability

and flexibility of humans. ... Expecting a machine close to the creative intelligence of a human within the next 50 years would be highly ambitious.'

Richardson believes that our fear of machines becoming too advanced has more to do with human nature than anything intrinsic to the machines themselves. In her view, it stems from humans' tendency to personify inanimate objects: we create machines based on representations of ourselves, imagine that machines think and behave as we do, and therefore see them as an autonomous threat. 'One of the consequences of thinking that the problem lies with machines is that ... we tend to imagine they are greater and more powerful than they really are and subsequently they become so.'

This led on to the third question, 'Should we be scared by advances in artificial intelligence?' To this question, Rees replied, 'Those who should be worried are the futurologists who believe in the so-called "singularity".* ... And another worry is that we are increasingly dependent on computer networks, and that these could behave like a single "brain" with a mind of its own, and with goals that may be contrary to human welfare. I think we should ensure that robots remain as no more than "idiot savants" lacking the capacity to outwit us, even though they may greatly surpass us in the ability to calculate and process information.'*

Wolpert's response was to say that we have already seen the damaging effects of artificial intelligence in the form of computer viruses. 'But in this case,' he says, 'the real intelligence is the malicious designer. Critically, the benefits of computers outweigh the damage that computer viruses cause. Similarly, while there may be misuses of robotics in the near future, the benefits that they will bring are likely to outweigh these negative aspects.'

Richardson's response to this question was this: 'We need to ask why fears of artificial intelligence and robots persist; none have in fact risen up and challenged human supremacy.' She believes that as robots have never shown themselves to be a threat to humans, it seems unlikely that they ever will. In fact, she went on, 'Not all fear [robots]; many people welcome machine intelligence.'

In answer to the fourth question, 'What can science fiction tell us about robotics?', Rees replied, 'I sometimes advise students that it's better to read first-rate science fiction than second-rate science – more stimulating, and perhaps no more likely to be wrong.'

As his response, Wolpert commented, 'Science fiction has often been remarkable at predicting the future. ... Science fiction has painted a vivid spectrum of possible futures, from cute and helpful robots to dystopian robotic societies. Interestingly, almost no science fiction envisages a future without robots.'

Finally, on the question of science fiction, Richardson pointed out that in modern society, people tend to think there is reality on the one hand, and fiction and fantasy on the other. She then explained that the division did not always exist, and that scientists and technologists made this separation because they wanted to carve out the sphere of their work. 'But the divide is not so clear cut, and that is why the worlds seem to collide at times,' she said. 'In some cases, we need to bring these different understandings together to get a whole perspective. Perhaps then, we won't be so frightened that something we create as a copy of ourselves will be a [threat] to us.'

** terraforming: modifying a planet's atmosphere to suit human needs*
*** singularity: the point when robots Will be able to Start creating ever more sophisticated versions of themselves*

Questions 27 - 33
Match each statement with the correct expert, A, B or C. You may use any letter more than once.

List of Experts

A Martin Rees
B Daniel Wolpert
C Kathleen Richardson

List of Findings

27 For our own safety, humans will need to restrict the abilities of robots. _____
28 The risk of robots harming us is less serious than humans believe it to be. _____
29 It will take many decades for robot intelligence to be as imaginative as human intelligence. _____
30 We may have to start considering whether we are treating robots fairly. _____
31 Robots are probably of more help to us on Earth than in space. _____
32 The ideas in high-quality science fiction may prove to be just as accurate as those found in the work of mediocre scientists. _____
33 There are those who look forward to robots developing greater intelligence. _____

Questions 34 - 36
Complete each sentence with the correct ending, A-D, below.
List of Endings

34 Richardson and Rees express similar views regarding the ethical aspect of _____
35 Rees and Wolpert share an opinion about the extent of _____
36 Wolpert disagrees with Richardson on the question of _____

A robots to explore outer space.
B advances made in machine intelligence so far.
C changes made to other planets for our own benefit.
D the harm already done by artificial intelligence.

Questions 37 - 40
Choose the correct letter, A, B, C or D.
Write the correct letter in boxes on your answer sheet.

37. What point does Richardson make about fear of machines?

A It has grown alongside the development of ever more advanced robots.
B It is the result of our inclination to attribute human characteristics to non- human entities.
C It has its origins in basic misunderstandings about how inanimate objects function.
D It demonstrates a key difference between human intelligence and machine intelligence.

38. What potential advance does Rees see as a cause for concern?

A robots outnumbering people
B robots having abilities which humans do not
C artificial intelligence developing independent thought
D artificial intelligence taking over every aspect of our lives

39. What does Wolpert emphasise in his response to the question about science fiction?

A how science fiction influences our attitudes to robots
B how fundamental robots are to the science fiction genre
C how the image of robots in science fiction has changed over time
D how reactions to similar portrayals of robots in science fiction may vary

40. What is Richardson doing in her comment about reality and fantasy?

A Warning people not to confuse One with the other

B outlining ways in which one has impacted on the other

C recommending a change of approach in how people view them

D explaining why scientists have a different perspective on them from other people

SPEAKING

PRACTICE 1

Part 1:

1. What is the most useful piece of technology you use every single day?
2. How quickly do you usually adapt to new software updates or new phone models?
3. Do you prefer reading physical printed books or using digital e-readers/tablets? (Why?)
4. Have you ever tried doing a "digital detox" by turning off all screens for a whole day?
5. What is one daily task that you wish technology or AI could handle completely for you?

Part 2:

Describe an obsolete piece of technology (an old-fashioned gadget or software) that you used in the past but is rarely seen today.

You should say:

- What this piece of technology was
- When and why you used it
- How it worked compared to modern alternatives
- And explain how you feel about its disappearance or replacement in modern life.

Part 3:

1. Why do older generations often struggle more with accepting and mastering cutting-edge technology compared to teenagers?
2. Do you think governments should enforce stricter regulations on the development of artificial intelligence to prevent job displacement?

PRACTICE 2

Part 1:

1. How long have you known your closest friend?
2. Do you think having a small circle of close friends is better than having a large network of acquaintances?
3. What quality do you value most in a true friend?
4. Is there an adult outside your family (like a teacher, coach, or neighbour) who has positively influenced you?
5. Do you find it easy or difficult to seek advice from others when dealing with personal dilemmas?

Part 2:

Describe a time when you had to resolve a serious disagreement or misunderstanding with a friend or family member.

You should say:

- Who this person was and what your relationship was like before
- What the conflict or misunderstanding was about
- How both of you handled and communicated through the problem
- And explain how resolving this issue changed or deepened your relationship afterward.

Part 3

1. How do busy work schedules change the way big families stay in touch?
2. Do different personalities make a relationship stronger, or do they cause more arguments?
3. Does how a person is raised as a child affect how they make friends as an adult?
4. Why do people in big cities talk to their neighbours less than before?

WRITING

TASK 2 – OPINION ESSAYS

I. Structure of an Opinion essay:

1. Introduction:

- **Background information:** data or facts connected with the topic
- **Topic sentence:** main idea of whole text, repeat the topic
- **Thesis statement:** your opinion / answer / approach to the question

2. Body paragraphs:

- **Body paragraph A: THE OTHER OPINION**
  - **Topic sentence:** main idea of the paragraph (THE OTHER OPINION YOU DON'T CHOOSE)
    - **Idea 1:** why people agree 1
      - **Detail 1:** reason / result / example / comparison
    - **Idea 2:** why people agree 2
      - **Detail 1:** reason / result / example / comparison
      - **Detail 2:** reason / result / example / comparison

- **Body paragraph B: YOUR OPINION**
  - **Topic sentence:** main idea of the paragraph (THE OPINION YOU CHOOSE)
    - **Idea 1:** why people agree 1
      - **Detail 1:** reason / result / example / comparison
      - **Detail 2:** reason / result / example / comparison
    - **Idea 2:** why people agree 2
      - **Detail 1:** reason / result / example / comparison
      - **Detail 2:** reason / result / example / comparison

3. Conclusion:

- **Summary:** repeat ideas in the body paragraph A and B
- **Restatement:** main idea of whole text + your opinion / answer / approach to the question

II. Identifying Opinion essays:

WRITING TASK 2

You should spend about 40 minutes on this task.

Write about the following topic:

Some people think that social networking sites have a huge negative impact on both individual and society.
To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge and experience.

Write at least 250 words.

WRITING TASK 2

You should spend about 40 minutes on this task.

Write about the following topic:

Some people think that robots are very important to human's future development, while others think that they are dangerous and have negative effects on society.
Discuss both views and give your opinion.

Give reasons for your answer and include any relevant examples from your own knowledge and experience.

Write at least 250 words.

WRITING TASK 2

You should spend about 40 minutes on this task.

Write about the following topic:

With the increase in the use of mobile phones and computers, fewer people are writing letters. Some people think that the traditional skill of writing letters will disappear completely.
To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge and experience.

Write at least 250 words.

III. Practice:

PRACTICE 1

You should spend about 40 minutes on this task. Write about the following topic:

Some people think that social networking sites have a huge negative impact on both individual and society.
To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge and experience. Write at least 250 words.

1. Question analysis. Answer these questions below.

a. What is the topic of the task? _____
b. What is the theme of the task? _____
c. What type of essay is this? How will you answer it? _____

2. Finish the outline for the two body paragraphs using the correct words in brackets.

Body paragraph A: SOCIAL MEDIA **ENCOURAGE SOCIAL ENGAGEMENT / LEAD TO SOCIAL ISOLATION**

- Reason 1: provide variety in means of **(contact / communication / touch)**
  - Detail 1: **(face-to-face / in-person / parasocial)** interaction limited to **(geographical / distant / regional)** location
  - Detail 2: break **(off / down / out)** this barrier with **(remote / distant / far)** messaging, _____, _____ => **(grow / expand / improve)** one's social circle and **(stay / lose / maintain)** in touch with beloved ones
- Reason 2: promote **(individual growth / social networking / self-care)**
  - Detail 1: **(access / entrance / opportunity)** to of online news **(media / origins / sources)** (e.g. _____)
  - Detail 2: able to **(work / make / do)** own research on topic of **(leisure / interest / hobby)** => broaden knowledge

Body paragraph B: SOCIAL MEDIA **ENCOURAGE SOCIAL ENGAGEMENT / LEAD TO SOCIAL ISOLATION**

- Reason 1: proliferation of **(weak ties / casual conversation / loose bonds)**
  - Detail 1: find less meaningful connections when engaging **(over / across / with)** other users
  - Detail 2: the lack of true **(closeness / intimacy / companionship)** => a sense of **(separation / alienation / estrangement)**
- Reason 2: exposed to **(mistake / misinformation / misunderstanding)**
  - Detail 1: **(traversing / circulation / movement)** of large amount of data on the web without **(control / regulation / fact-checking)**
  - Detail 2: more likely to **(absorb / consume / digest)** fake or misleading news => create irrational **(fear / empathy / autonomy)** among the public

3. Write your own essay based on the outline above.

PRACTICE 2

You should spend about 40 minutes on this task. Write about the following topic:

Some people think that robots are very important to human's future development, while others think that they are dangerous and have negative effects on society. Discuss both views and give your opinion

Give reasons for your answer and include any relevant examples from your own knowledge and experience. Write at least 250 words.

1. Question analysis. Answer these questions below.

a. What is the topic of the task? _____
b. What is the theme of the task? _____
c. What type of essay is this? How will you answer it? _____

2. Finish the outline for the two body paragraphs using the correct words in brackets.

Body paragraph A: ROBOTS **HAS ADVERSE IMPACTS ON SOCIAL WELFARE / PROMOTES GROWTH**

- Reason 1: perform **(dangerous / easy / social)** tasks
  - Detail 1: replace workforce with high **(professional / occupational / natural)** hazards (e.g. firefighting, police, _____ ___)
  - Detail 2: resilient robotic rescuer which makes accurate risk calculation => avoid **(facility / human / robot)** casualties
- Reason 2: have a tangible **(effect / cause / contribution)** on productivity
  - Detail 1: incorporate into **(creative / repetitive / technical)** tasks in the house and at work
  - Detail 2: reduce labour costs => human can focus on **(manual / recreational / monotonous)** activities

Body paragraph B: ROBOTS **HAS ADVERSE IMPACTS ON SOCIAL WELFARE / PROMOTES GROWTH**

- Reason 1: increase **(employment / unemployment / performance)** rate
  - Detail 1: become more **(multifunctional / multiuse / multiple)** => (example) from **(bulk / group / mass)** production to accessing data, retrieving and cataloguing **(this / them / it)**
  - Detail 2: loss of millions of **(low-level / highly specialized / heavy-lifting)** jobs worldwide
- Reason 2: threatens **(data / information / storage)** security
  - Detail 1: (example) technical failure or **(malware / software / hardware)** affects automated machines and office computers => instant **(collapse**
  - Detail 2: rely too much **(over / on / in)** AI-driven systems => lose the cognitive ability to **(solve / figure / adapt)** to these problems

3. Write your own essay based on the outline above.

PRACTICE 3

You should spend about 40 minutes on this task.

Write about the following topic:

With the increase in the use of mobile phones and computers, fewer people are writing letters. Some people think that the traditional skill of writing letters will disappear completely. To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your own knowledge and experience.

Write at least 250 words.

1. Question analysis. Answer these questions below.

a. What is the topic of the task? _____

b. What is the theme of the task? _____

c. What type of essay is this? How will you answer it? _____

2. Finish the outline for the two body paragraphs using the correct words in brackets.

Body paragraph A: HANDWRITTEN TEXT **WILL BECOME OUTDATED / REMAIN USEFUL**

- Reason 1: expression of individual personality **(qualities / features / traits)**
  - Detail 1: reflect **(attitude / feeling / disposition)** through style, organization and **(correctness / precise / accuracy)** of a person's writing
  - Detail 2: practical usage in education and character **(develop / development / developing)** => (Example) journalist research into students at University of Tokyo: handwriting **(overlook / determine / decide)** academic performance
- Reason 2: creative method for long-term information **(remembrance / memorization / collection)**
  - Detail 1: organize ideas themselves with freehand annotation, diagrams, and labels **(instead of / in addition to / whereas)** copying => take the written content **(into / to / in)** more consideration
  - Detail 2: (compared to electronic devices) archive, catalogue and retrieve large amounts of data => **(forget / neglect / consider)** understanding

Body paragraph B: HANDWRITTEN TEXT **WILL BECOME OUTDATED / REMAIN USEFUL**

- Reason 1: replaced by digital storage methods in **(liking / preference / favor)** of speed and convenience
  - Detail 1: **(share / spread / deliver)** information instantly to recipients anywhere in the world
  - Detail 2: popular among **(younger / older / middle aged)** generations => texting and video call more efficient way of communicating than writing letters and notes
- Reason 2: less cost-**(effective / reduction / economical)**
  - Detail 1: requires paper and pen => continuous **(purchase / shopping / consumption)** for supply which can affect **(the/a/an)** environment (e.g. trees for paper production and disposal of plastic pens)
  - Detail 2: (compared to machines) data stored in one **(movable / small / portable)** device that can **(transmit / transfer / transport)** to others or the cloud storage => less likely to be lost

3. Write your own essay based on the outline above.
